

Collaborator Onboarding Guide

How to set up GitHub and Claude to contribute to the

Training Package for Replication

Organization: easvrn • Repository: Training-Package-for-Replication

Admin contact: john.punzalan@eisnetwork.co

Table of Contents

Section 1 — Prerequisites

Before you begin, make sure you have the following:

- A computer running macOS or Windows
- An active internet connection
- The Claude native app already installed on your computer
- A GitHub account (instructions below if you need to create one)
- A Claude account at claude.ai
- An invitation to the easvrn organization repository from the admin

1.1 — Create a GitHub Account

If you already have a GitHub account, skip to Section 1.2.

1. Open your web browser and go to <https://github.com>
2. Click the green "Sign up" button in the top right corner
3. Enter your email address, create a password, and choose a username
4. Complete the verification puzzle and click Create account
5. Open the confirmation email from GitHub and click the verification link
6. You now have a GitHub account

1.2 — Accept Your Repository Invitation

The admin will send you an email invitation to join the easvrn organization on GitHub.

1. Open the invitation email from GitHub
2. Click "Join easvrn" or "Accept invitation"
3. You now have access to the Training Package for Replication repository

Note: If you did not receive an invitation, contact the admin at john.punzalan@eisnetwork.co

Section 2 — Create a Claude Account

Claude is the AI assistant you will use to make changes to the project. You need a Claude account to use it.

2.1 — Sign Up for Claude

1. Open your browser and go to <https://claude.ai>
2. Click "Sign up"
3. Sign up using your Google account, or enter your email address and create a password
4. Verify your email if prompted
5. You are now logged in to Claude

Note: A free Claude account is sufficient to get started. You can upgrade to Claude Pro at any time for more usage.

Section 3 — Connect the GitHub Connector in Claude

Claude has a built-in GitHub connector that lets you interact with GitHub repositories directly inside Claude — no command-line knowledge required. You need to connect it once in both the native app and the web version.

3.1 — Connect in the Claude Native App

Since the Claude native app is already installed on your computer, open it and follow these steps:

1. Open the Claude native app on your computer
2. Start a new conversation
3. Look for the connector or tools icon near the message input box (a plug icon or grid icon)
4. Click it to open the connectors panel
5. Search for "GitHub" and click on it
6. Click "Connect" or "Authorize"
7. A GitHub authorization page will open in your browser — click "Authorize"
8. Return to the Claude app — the GitHub connector is now active

Tip: *You only need to do this once. The connector will stay connected for all future sessions.*

3.2 — Connect in the Claude Web Version (claude.ai)

You can also use Claude from your browser at <https://claude.ai>. The GitHub connector needs to be connected there as well:

1. Go to <https://claude.ai> and log in with your Claude account
2. Start a new conversation by clicking "New chat" in the left sidebar
3. Click the connector or tools icon near the message input box
4. Search for "GitHub" and click on it
5. Click "Connect" or "Authorize" and complete the GitHub authorization
6. The GitHub connector is now active in the web version as well

Note: *Claude only gets access to the repositories you authorize. Your GitHub credentials are never stored by Claude directly.*

3.3 — Verify the Connection

To confirm the connector is working in either the app or the web version, type:

```
List the repositories in the easvrn organization
```

Claude should respond with a list that includes Training-Package-for-Replication. If it does, you are fully connected and ready to collaborate.

Section 4 — Clone the Repository

Cloning means downloading a copy of the project to your computer so you can work on it locally.

4.1 — Clone by Asking Claude

The easiest way is to ask Claude directly inside the native app:

1. Open the Claude native app
2. Ask Claude to clone the repository for you:

```
Clone the easvrn/Training-Package-for-Replication repository into my Documents folder
```

3. Claude will run the necessary commands and confirm when done

4.2 — Clone Manually (Alternative)

If you prefer, open Terminal (macOS: Cmd + Space, type Terminal) or Command Prompt (Windows: Win + R, type cmd) and run:

```
git clone https://github.com/easvrn/Training-Package-for-Replication.git
```

Note: You only need to clone the repository once. After that, use `git pull` to get updates.

Section 5 — Daily Workflow

This is the process you will follow every time you want to make changes. You can do everything by talking to Claude in plain English — no need to memorize commands.

Step 1 — Open Claude

Open the Claude native app on your computer. Make sure the GitHub connector is active (see Section 3).

Tip: You can also use the web version at claude.ai if you prefer to work from your browser.

Step 2 — Pull the Latest Version

Always start by asking Claude to get the latest changes:

```
Pull the latest version of the project from GitHub
```

Or run directly:

```
git pull origin master
```

Note: Never skip this step. It ensures you have the most up-to-date version before making changes.

Step 3 — Create Your Working Branch

Ask Claude to create a branch for your work:

```
Create a new branch called feature/your-name-topic
```

Example:

```
Create a new branch called feature/alice-module2-update
```

Or run directly:

```
git checkout -b feature/your-name-topic
```

Step 4 — Make Your Changes Using Claude

Ask Claude for help in plain English. For example:

- "Update the introduction text in songa-docs.html to mention the new module"
- "Fix the broken image reference on page 5"
- "Add a new section about field data collection after the overview"

Claude will read the files, suggest changes, and apply them for you. Review the changes before moving to the next step.

Step 5 — Commit Your Changes

Ask Claude to save your work:

```
Commit my changes with the message: Add facilitator notes to Module 3
```

Or run directly:

```
git add .  
git commit -m "Brief description of your change"
```

Step 6 — Push Your Branch to GitHub

Ask Claude to upload your branch:

```
Push my branch to GitHub
```

Or run directly:

```
git push origin feature/your-name-topic
```

Step 7 — Open a Pull Request

Ask Claude to create a Pull Request for review:

```
Open a pull request titled "Add Module 3 facilitator notes" with a  
short description of what I changed
```

Claude will use the GitHub connector to create the PR on your behalf.

Step 8 — Wait for Review

The admin will receive a notification and review your Pull Request. They may:

- Approve and merge your changes into the main project
- Leave comments asking for adjustments
- Request changes before merging

You will receive an email notification when your PR is reviewed. You can also ask Claude: "What is the status of my pull request?"

Section 6 — Quick Command Reference

Use this table when you prefer to run Git commands manually instead of asking Claude.

Command	What it does
<code>git status</code>	Shows what files have changed
<code>git pull origin master</code>	Downloads the latest version from GitHub
<code>git checkout -b feature/name</code>	Creates a new working branch
<code>git add .</code>	Stages all modified files for commit
<code>git commit -m "message"</code>	Saves your changes with a description
<code>git push origin branch-name</code>	Uploads your branch to GitHub
<code>claude</code>	Opens Claude Code in the current folder

Section 7 — Troubleshooting

GitHub Connector Not Showing in Claude

- Make sure you are logged in to claude.ai
- Try refreshing the page and opening a new chat
- Look for a plug icon or "Add tools" button near the message input box
- If still not visible, contact the admin

"Authorization Failed" When Connecting GitHub

- Make sure you are logged in to GitHub in the same browser
- Try disconnecting and reconnecting the GitHub connector
- Check that you accepted the easvrn organization invitation (Section 1.2)

Claude App Won't Open or Crashes

- Try restarting your computer and reopening the Claude native app
- Make sure your operating system is up to date
- If the issue persists, contact the admin at john.punzalan@eisnetwork.co

"Permission denied" or "Repository not found"

- Check your email for a GitHub invitation from the admin
- Make sure you accepted the invitation (Section 1.2)
- Contact the admin at john.punzalan@eisnetwork.co

Merge Conflict

If two people edited the same part of a file, ask Claude to help:

```
I have a merge conflict in [filename]. Help me fix it.
```

Claude will walk you through resolving it step by step.

"node: command not found"

- macOS: run `brew install node` in Terminal
- Windows: download from <https://nodejs.org> (LTS version)

Section 8 — Getting Help

Ask Claude Directly

The fastest way to get help is to ask Claude. In the web version at claude.ai, or inside Claude Code:

```
claude
```

Then type your question in plain English. Claude can help with any task related to the project.

Report an Issue on GitHub

If you find a bug, broken link, or content error, open an issue on the repository:

Repository Issues: <https://github.com/easvrn/Training-Package-for-Replication/issues>

Contact the Project Admin

Email: john.punzalan@eisnetwork.co

Organization: easvrn on GitHub

You're all set! Welcome to the team.
